

The "Jam Session Classic" is an all around kite that offers fun flying for everyone from beginners to experts! The ease of handling and the possibilities of both trick flying and precision flying are what make this kite an unrivaled "Classic". Congratulations on purchasing the most popular all around High Quality (HQ) Sport Kite ever sold in the USA.

The HQ split cap makes it easier to spread the leading edge

using a tensioning cord. After assembly, the knots and cord ends are tucked away inside recesses specially provided for this purpose, so that you achieve a clean finish. There's also a neat way of attaching a trick cord here.

Step 1: Pull the short tensioning cord through the hole in the cap so that knot 1 disappears inside the recess. Now put the other end through the knot on the leading edge, as shown in the drawing.

Step 2: Stretch the leading edge with the tensioning cord so that knot 2 locks into the bottom of the slot.

Due to the unique balance of "The Jam", personal preference adjustments are available with minor modifications. Notice that the kite is shipped with the adjustment in the BEGINNER position. By simply moving the flight line from the BEGINNER position (see diagram 2) to the ADVANCED position, the flyer will create a much less stable and more radical trick flying kite. Simply loosen the lark spar knot and slide the flight line up to the second position (see diagram 2) and the "Jam" will fly with greater sensitivity. The beginner or novice should learn basic flying techniques with the factory settings. No adjustments to the bridle is necessary to begin flying.

Included with this kite you will also receive two "wind brakes". These are gauze pieces that are attached to both sides of the lower leading edge using the inner and center standoffs, (see diagram 3). By placing these "brakes" on your "Jam" you can SLOW the effects of strong, fast moving winds. This wind "braking" effect, is especially desirable for beginners and novices and will give the flyer additional time to adjust his/her steering lines even in strong winds.

NOTE: We recommend using high quality kite line for your purchase. Ask for Laser Pro or equal quality kite line in 90-150 lb. pull test and 80-125ft. length. Your local kite shop or kite dealer can recommend the right line for you and your flying conditions. ALWAYS BE SURE YOUR KITE LINES ARE EXACTLY THE SAME LENGTH.

CAUTION: NEVER FLY NEAR OR UNDER ELECTRIC POWER LINES OR WHERE PEOPLE OR ANIMALS ARE IN DANGER OF BEING HIT WITH YOUR KITE OR LINES.

CLEAN, UNOBSTRUCTED WIND IS REQUIRED FOR FLYING SPORT KITES. On a hill, at the beach or in a very large field are all considered ideal locations for the best conditions.

For the local AKA kite club nearest you in the USA call: 1 800-AKA-2550. Your local AKA kite club members are always willing to give you advice on flying techniques and the best kite flying locations in your area.

OWNERS MANUAL

Jam Session Classic

SPECIFICATION

Wingspan:	217cm / 85"
Height:	107cm / 42"
Weight:	326g / 11,75 oz
Rec. lines:	90-150lb./80-125ft.
Wind range:	3-24mph.
Sail cloth:	Reinforced nylon
Spars:	6mm hollow carbon rod

The right to make technical alterations is reserved!
