## A PASSION TO PERFORM

Progressive! Original! Innovative technology! Our current "HQ Sportkites" selections will satisfy all of your flying obsessions!

Our innovative design team is passionate and working overtime carving the future of "HQ Sportkites" through the sky.

With performance, durability and an ease of use in mind, we continuously raise the bar with new product conceptions and specifications. "HQ" is proud of our constantly growing sportkites family and will continue to deliver superior products with outstanding customer service and assistance.

With more than 30 years of experience in the development and production of innovative sport kites, the "HO Sportkites" brand has a large community of fans worldwide.

Every year, we invest considerable funds in our development work. Our stunt kite models are developed at our site in Rastede/Germany by a highly motivated and competent team that uses lots of practica know-how in the design of new models.

We work according to strict quality standards. Our models ar produced with high-quality space-age components and offer best performance and a fair price-performance ratio for dealers and end consumers in their respective classes.

The decisive quality features for a high-quality kite fabric are ligh weight, tear-resistance, and a resilient coating.

## Ripstop-Polyester and Nylon

Ripstop means fabrics that have been woven with a specia echnique and that are particularly tear-proof. Grid-like einforcement threads are integrated into the thin fabric at distances of 5 to 8 millimetres. Benefits of modern Ripstop fabrics are their extremely light structure, low wetness elongation and very high tear resistance

The most important fiber that is processed into Ripstop fabric is polyamide; the fabric produced with this is called Ripstop-Nylon.

Polyester fabric is also processed into Ripstop fabric. Polyester akes up only little moisture, is highly UV-resistant, maintains its shape even when wet and can be coated very well.

Transparent Mylar-Laminate
Mylar-laminate is a high-quality layered composite that is produced of several layers. The core layer is made up of a highly resilient fiber fabric. The special benefit of Mylar is a high resilience and extreme form retention. Processing of Mylar film also gives any sail a particularly technical and high-quality look.

## FRAME OF SPACE AGE COMPOSITES

The frames of all "HQ Sportkites" are constructed solely of state-of the-art composites that are used in aviation and aerospace as well.

## Carbon Fiber

Carbon fibers are a high-tech material that is particularly suitabl for applications where a low weight is needed at a concurrent high stiffness. Carbon fibers are stiffer than steel, lighter than fiberglass and twist less easily. Kites with carbon frames therefore fly particularly precisely.

## Fiberglass

The strength properties of fiberglass fibers correspond to those of metals, but at a much lower weight. Fiberglass fibers are also extremely flexible and break-proof. We use fiberglass specifically in the construction of beginners' stunt kites. With their "crumple zone", fiberglass stunt kites will easily survive the feared crashes.

Connection Technology
In the connection technology of "HQ Sportkites", we leave nothing to chance with our specifically constructed high-quality "HQ" connectors. Form and material resist the challenges of any wind, weather and temperature.

## A BIT OF LINE SCIENCE

Although the quality of the flight lines essentially influence flight performance and flying fun, quite a number of stunt kites are only quipped with moderate quality lines. "HQ Sportkites", however, contain only braided flight lines of high-quality fibers.

Dyneema (Spectra) lines
Their extremely thin, light-weight fibers with very little stretch make Dyneema the ideal lines for stunt kites. At the same weight, Dyneema fibers are much more tension resilient than steel. The minimum elongation of the material (less than $5 \%$ ) ensures maximum control of the kite, while the very small line cross-section minimises air resistance. The surface of our Dyneema lines is very mooth, so that they will not block or even "saw through" when urning in. The fiber is extremely resilient to abrasion, moisture, UV radiation and chemicals.
Most "HO Sportkites" are equipped with hi-tech hes from Liros / Hamburg. Top quality - mad in Germany

Polyester
Polyester fibers are more cost-efficient than Dyneema. For "HQ" eginners' stunt kites in the entrance price ranges, refined, braided polyester lines are used. The natural elasticity of the fibers is dras tically reduced by the pre-stretching of the lines. Polyester fibers Iso permit a small line cross-section with a reduced air resistance. he remaining extension after stretching deflects wind gusts better than Dyneema does.

Twisted or braided lines?
n cheap "no-name" kites, low-quality lines are often used that will wist very quickly. "HQ Sportkites", in contrast, are equipped with high-quality closely braided line sets only to provide a trouble-free handling.

## SPARE PARTS AND REPAIR SERVICE FOR HQ SPORTKITES

With a sportkite from HO, consumers rely on the highest quality in kite sports. Nevertheless, under harsh operating conditions, ne sports. Nevertheless, under harsh operating conditions, damage can occur or parts can be lost through inattentiveness. if something breaks invento offers a spare parts and repair service something breaks or the question arises whether a repair is , parts or repair service, do not hesitate to contact us. Many spare parts can be ordered directly from the online store. We handle $t$ qualified specialists as quickly as possible.

10

Limbo II is truly a worthy successor to the well-known Limbo - more pull, more precision, sturdier, simple
to assemble and the addition of bold graphite fabric to assemble and the addition of bold graphite fabric
accents. Despite the good-natured flight characteristics which make the Limboll an excellent choice for beginners, this kite offers exceptional perfomance in its class - pleasant design, precise and punchy flight,
wide wind range. wide wind range.

A frame of sturdy fiberglass renders the Limbo II extremely robust. No matter whether the winds are great fun even in difficult wind conditions.

forward and reverse flights, hovers, breathtaking propeller spins - all this is aprav of the freaight repertoire
of the Meteor. The special feature of this tuad-line kite of the Meteor. The special feature of this quad -line kite,
however, is the calm and controllability with which it hovever, is the caim and controlability yith The extraordinary flying performances of quad-line
kites attract more and more people. Beginners who
want to learn more about the possibilities of quad-
line e ites, an attractive design in the Meteor - and all at a very
attractive price. Even experts will appreciate the flying potential and controllability of this kite.

For more than 20 years, the name "HQ Symphony" is a synonym for most successful foil kites worldwide. From generation to generation, all Symphonys have been adapted to the latest technological standards. With their current lines all "HQ Symphonys" belong to the "top of the line" foil kites in their classes. All "HQ Symphonys" guarantee first-class components, best workmanship and extreme durability "HQ Symphony" offers a variety of lines for different target groups:

## Symphony Beach

- Designed to match the needs of beginners, provides excellent value for the money
- Symphony Beach belongs to the most successful and best-selling foil kites worldwide

Developed with paragliding know-how

- Highly user-friendly - no foil kite in this class has fewer bridle attachment points
- Provides excellent flight performance and decent accessories
- Equipped with wrist straps or 2-line controlbar
- Compact carrying case - ideal for traveling and holidays

## Symphony Pro

The Symphony line for demanding pilots - with uncompromising components and accessories
Developed with paragliding know-how

- Highly user-friendly - no foil kite in this class has fewer bridle attachment points
- Provides amazing flight performance and uncompromising accessories
- 2021 update for larger Symphony Pros (2.2 \& 2.5): Convert to Quad!
- Sporty designs - stylish carrying cases
- Compact carrying case - ideal for traveling and holidays

## Symphony Speed II

The Symphony line for all pilots who want to push their limits
Higher aspect ratio enables these kites to fly much faster than regular Symphonys
Developed with paragliding know-how

- Highly user-friendly - with uncompromising components and accessories
- Provides amazing flight performance and breathtaking speeds
- Sporty designs - stylish carrying cases
- Compact carrying cases - ideal for travelling and holidays
- Detailed instruction manual (Sportkite Guide)
