A PASSION TO PERFORM

Progressive! Original! Innovative technology! Our current "HQ Sportkites" selections will satisfy all of your flying obsessions!

Our innovative design team is passionate and working overtime carving the future of "HQ Sportkites" through the sky.

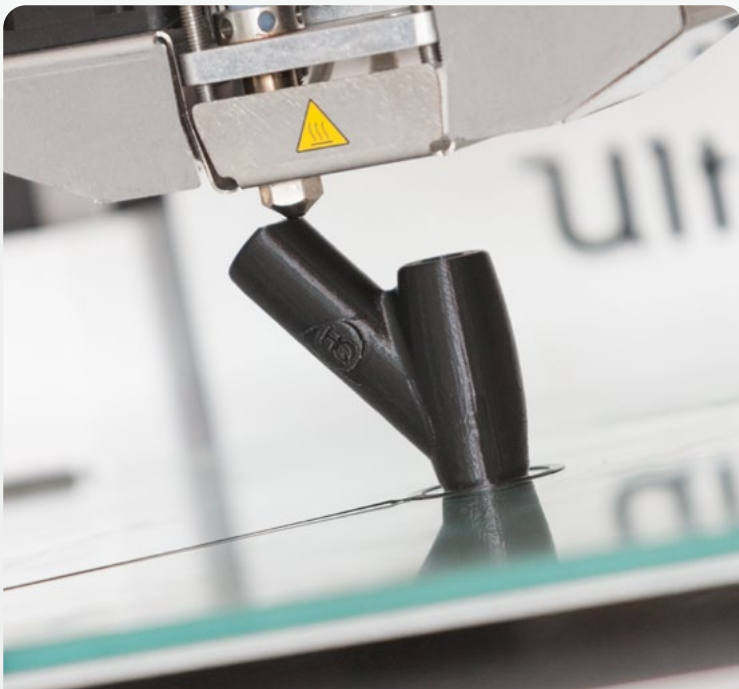

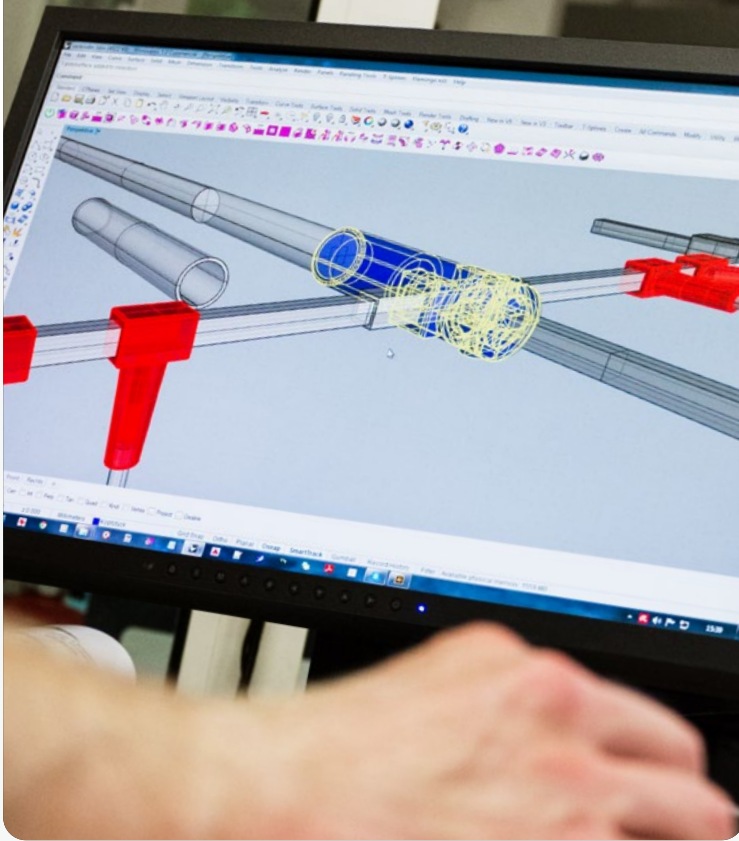

With performance, durability and an ease of use in mind, we continuously raise the bar with new product conceptions and specifications. "HQ" is proud of our constantly growing sportkites family and will continue to deliver superior products with outstanding customer service and assistance.

With more than 30 years of experience in the development and production of innovative sport kites, the "HQ Sportkites" brand has a large community of fans worldwide.

Every year, we invest considerable funds in our development work. Our stunt kite models are developed at our site in Rastede/Germany by a highly motivated and competent team that uses lots of practical know-how in the design of new models.

We work according to strict quality standards. Our models are produced with high-quality space-age components and offer best performance and a fair price-performance ratio for dealers and end consumers in their respective classes.

The decisive quality features for a high-quality kite fabric are light weight, tear-resistance, and a resilient coating.

Ripstop-Polyester and Nylon

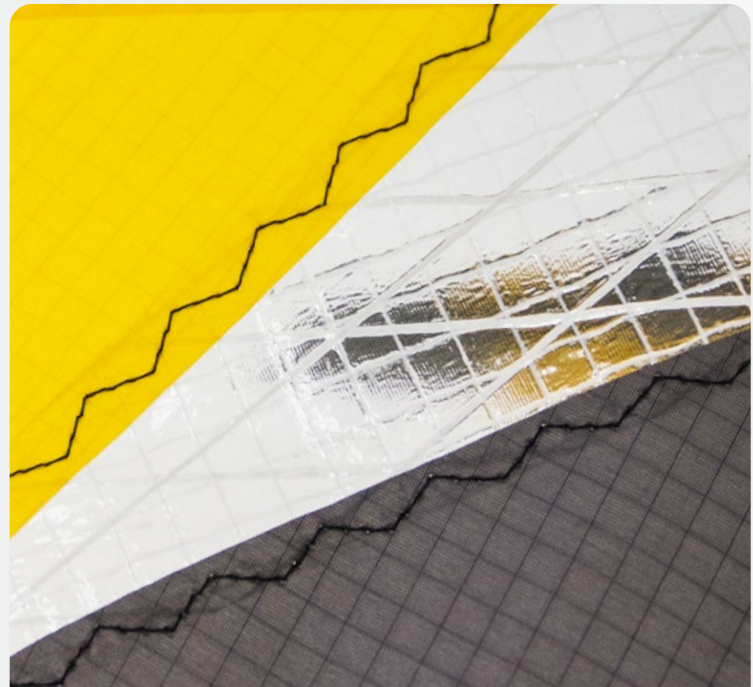

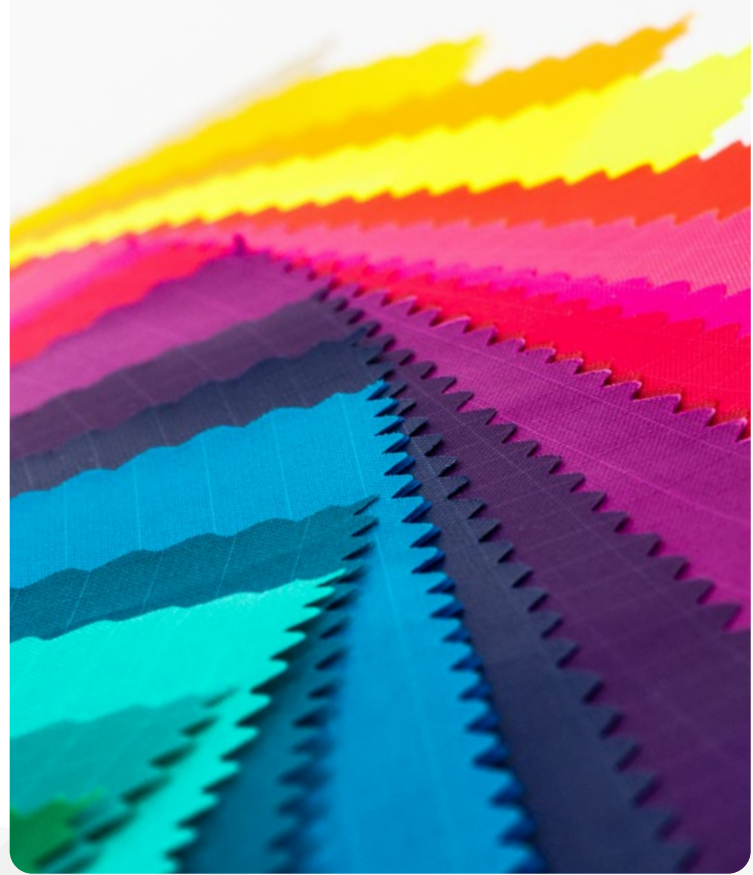

Ripstop means fabrics that have been woven with a special technique and that are particularly tear-proof. Grid-like reinforcement threads are integrated into the thin fabric at distances of 5 to 8 millimetres. Benefits of modern Ripstop fabrics are their extremely light structure, low wetness elongation and very high tear resistance.

The most important fiber that is processed into Ripstop fabric is polyamide; the fabric produced with this is called Ripstop-Nylon.

Polyester fabric is also processed into Ripstop fabric. Polyester takes up only little moisture, is highly UV-resistant, maintains its shape even when wet and can be coated very well.

Transparent Mylar-Laminate

Mylar-laminate is a high-quality layered composite that is produced of several layers. The core layer is made up of a highly resilient fiber fabric. The special benefit of Mylar is a high resilience and extreme form retention. Processing of Mylar film also gives any sail a particularly technical and high-quality look.

FRAME OF SPACE AGE COMPOSITES

The frames of all "HQ Sportkites" are constructed solely of state-of-the-art composites that are used in aviation and aerospace as well.

Carbon Fiber

Carbon fibers are a high-tech material that is particularly suitable for applications where a low weight is needed at a concurrent high stiffness. Carbon fibers are stiffer than steel, lighter than fiberglass and twist less easily. Kites with carbon frames therefore fly particularly precisely.

Fiberglass

The strength properties of fiberglass fibers correspond to those of metals, but at a much lower weight. Fiberglass fibers are also extremely flexible and break-proof. We use fiberglass specifically in the construction of beginners' stunt kites. With their "crumple zone", fiberglass stunt kites will easily survive the feared crashes.

Connection Technology

In the connection technology of "HQ Sportkites", we leave nothing to chance with our specifically constructed high-quality "HQ" connectors. Form and material resist the challenges of any wind, weather and temperature.

Although the quality of the flight lines essentially influence flight performance and flying fun, quite a number of stunt kites are only equipped with moderate quality lines. "HQ Sportkites", however, contain only braided flight lines of high-quality fibers.

Dyneema (Spectra) lines

Their extremely thin, light-weight fibers with very little stretch make Dyneema the ideal lines for stunt kites. At the same weight, Dyneema fibers are much more tension resilient than steel. The minimum elongation of the material (less than 5%) ensures maximum control of the kite, while the very small line cross-section minimises air resistance. The surface of our Dyneema lines is very smooth, so that they will not block or even "saw through" when turning in. The fiber is extremely resilient to abrasion, moisture, UV radiation and chemicals.

Most "HQ Sportkites" are equipped with hi-tech lines from Liros / Hamburg. Top quality - made in Germany.

Polyester

Polyester fibers are more cost-efficient than Dyneema. For "HQ" beginners' stunt kites in the entrance price ranges, refined, braided polyester lines are used. The natural elasticity of the fibers is drastically reduced by the pre-stretching of the lines. Polyester fibers also permit a small line cross-section with a reduced air resistance. The remaining extension after stretching deflects wind gusts better than Dyneema does.

Twisted or braided lines?

In cheap "no-name" kites, low-quality lines are often used that will twist very quickly. "HQ Sportkites", in contrast, are equipped with high-quality closely braided line sets only to provide a trouble-free handling.

"HQ SPORTKITES" ACCESSORIES: USEFUL, PRACTICAL, ATHLETIC!

Most "HQ Sportkites" are already delivered with "Ready to Fly" equipment – incl. lines, winders, wrist straps and a high-quality transport bag. The smart and practical original "HQ Sportkites" accessories are perfectly coordinated with every model.

Do you want optional accessories for growing demands? Explore our large range of "HQ Sportkites" genuine accessories for retrofitting on www.invento-hq.com.

SPARE PARTS AND REPAIR SERVICE FOR HQ SPORTKITES

With a sportkite from HQ, consumers rely on the highest quality in kite sports. Nevertheless, under harsh operating conditions, damage can occur or parts can be lost through inattentiveness. For this reason, Invento offers a spare parts and repair service if something breaks or the question arises whether a repair is worthwhile. Should you have any questions with respect to spare parts or repair service, do not hesitate to contact us. Many spare parts can be ordered directly from the online store. We handle the shipping of replacement parts or the repair of an HQ kite by qualified specialists as quickly as possible.

The diamond shape stands as a timeless favorite among beginner stunt kites. The Dancer Rainbow II features new, innovative connectors that make it a breeze to expand your kite fleet with stackable kites like the Dancer Rainbow II Expansion Kite (item no. 112339, available separately). This unique feature allows you to effortlessly launch multiple kites in succession, creating a captivating spectacle across a wide range of wind conditions. Whether you're a beginner or a seasoned pilot, the Dancer Rainbow II promises an exhilarating flying experience and promises hours of pure enjoyment. 15-meter tube tail included.

The Dancer Rainbow II Expansion Kite with pre-measured and pre-installed stacking lines is your ticket to effortless stacking and expanding the Dancer Rainbow II (lead kite, item no. 112338). You can seamlessly connect multiple expansion kites together, forming an impressive kite stack that can be flown in a captivating row. Comes without flying lines. User-friendly instructions included.

Limbo II is truly a worthy successor to the well-known Limbo – more pull, more precision, sturdier, simple to assemble and the addition of bold graphite fabric accents. Despite the good-natured flight characteristics which make the Limbo II an excellent choice for beginners, this kite offers exceptional performance in its class – pleasant design, precise and punchy flight, wide wind range.

A frame of sturdy fiberglass renders the Limbo II extremely robust. No matter whether the winds are light or strong sea breezes are blowing – Limbo II is great fun even in difficult wind conditions.

Flying stunt kites is a multi-faceted sport. First popularized in the late 80s and early 90s, team flying, as a demanding discipline of kite sports, is fashionable once again. Two or more skilled pilots flying in disciplined formation will find the perfect companion in the Fellow. With the Fellow, HQ offers a calm and extremely precise kite that flies as if on rails. The Fellow provides plenty of speed control. It flies cleanly through

corners and paints entire choreographies in the sky. If you are looking for a kite with accurate flying abilities or just want to relax, then the Fellow will be the right choice for you. And if you prefer to incorporate slack-line tricks, the Fellow will not disappoint you.

Whizz is one of the fastest kites in the HQ range with the potential of becoming a cult classic. This kite's potential for fun is incredible. Its unique twin keel, high-end wind range, robust frame and speed in flight make Whizz stand out. Whizz starts flying at wind speeds of 2 Bft! Just watch it go! It stays steady on course in gusty inland winds. Screaming spins occur

at speeds of 4 Bft and more. A flexible keel mounting and cambered leading edge guarantee smooth acceleration for pleasant feedback. Yet Whizz is demanding and always requires your concentration in its quest for constant movement. You simply have to keep an eye on it.

Little Arrow flies fast, really fast. While flying Little Arrow pilots can go to the limits of their response capacity. Despite his incredible maneuverability, Little Arrow flies very precisely. Loops look like a moving circular saw blade and make Little Arrow a challenge for eyes and hands. The start succeeds easily at 2-3 Beaufort, from 4 Beaufort the challenge begins with the

pilots' ability to concentrate. In high winds, this little racer requires strong lines as Little Arrow develops surprising traction for its size. So this kite promises a fast-paced action experience for all pilots who want to push their limits.

Arrow M - high speed combined with manageable power. Pilots seeking these attributes will immediately take the Arrow M into their hearts. Faster than Arrow and Arrow XL, easier to fly than the Whizz, the Arrow M provides impressive precision and a pleasant pull. Tight spins and razor-sharp ground passes provide

action and endless fun while flying. A sail made of bright green and graphite patterned polyester fabric with a sturdy carbon frame enable the Arrow M to fly in a wide wind range.

Arrow is an extremely dynamic "real racer" that combines power and speed in an incredible manner to provide challenging flight experiences. Astonishingly tight wing tip loops and high speeds, even in lower wind conditions, guarantee sporty and endless fun. The Arrow takes off easily and runs on rails through the air, cutting cleanly through gusty winds and staying on course – those are properties not characteristic for

kites in this class. With medium to high wind conditions, pilots must be ready for a challenge. In addition, the appealing carbon design and broad, crescent-shape appearance help makes the Arrow a unique kite.

- 👤 18+

The Arrow XL leaves no doubt about its purpose – pure power and a high degree of speed. Just like its smaller brother, the Arrow XL pulls dynamically and quickly on precise straights and extreme loops through the wind window. Even gusty winds do not strain the Arrow XL a bit. Flying the Arrow XL is a very special experience and

guarantees a fun workout. The size, shape and high-tech look underline the character of this kite, which belongs to experienced hands and requires the pilot's respect.

Flying clean and straight lines as if on rails, amazing forward and reverse flights, hovers, breathtaking propeller spins - all this is part of the flight repertoire of the Meteor. The special feature of this quad-line kite, however, is the calm and controllability with which it "paints" stunning flying figures in the sky. The extraordinary flying performances of quad-line kites attract more and more people. Beginners who

want to learn more about the possibilities of quad-line kites, will find a very versatile companion with an attractive design in the Meteor - and all at a very attractive price. Even experts will appreciate the flying potential and controllability of this kite.

- 👤 12+

A unique, crisscrossing spar configuration creates a leading edge that is extremely sturdy and absorbs impacts, making the Mojo perfect for first time quad-line flyers. The Mojo offers full quad-line control and is capable of forward and reverse movement, instantaneous stops, hovers and propeller spins.

Removable wind brakes help control speed and provide greater ease of control when learning. Detaching the wind brakes allows the Mojo to turn and spin extremely fast for pilots that have a good mind to give something new a try.

The Verve is HQ's high-performance quad-line sport kite. Prepare to be mesmerized by its flight acrobatics as it effortlessly executes forward and backward maneuvers, glides sideways, hovers gracefully, performs dynamic propeller spins and halts abruptly on a dime – all within the Verve's repertoire. Crafted with a robust frame composed of wrapped graphite Dynamic rods and a distinctively lightweight ripstop polyester sail, this kite maintains its shape thanks to its special bridle design. This exceptional combination elevates the Verve's flight characteristics to perfection. Launching the Verve is a breeze and it

exhibits remarkable precision even in light winds, offering unparalleled controllability. With its predictability, the Verve ensures maximum enjoyment for professionals and stands as an excellent choice for newcomers in the ever-expanding world of quad-line kites. The Verve comes „Ready to Fly,“ complete with high-quality Dyneema lines and handles, all at an exceptionally attractive price point.

Multi Kite

SINGLE LINE MODE

DUAL LINE MODE

TECHNICAL DATA

- ↔ 87 cm / 34"
- ↕ 1230 cm / 484" (incl. kite tail)
- ▤ Ripstop-Polyester
- ⤿ Polyester 20 kp / 44 lb., 2 x 25 m / 80 ft. on winder with straps + Polyester 40 kp / 90 lb., 60 m / 200 ft. on spool, incl.
- 🚩 Single Line Mode: 2-5 Bft. [11-38 km/h | 7-24 mph]
Dual Line Mode: 3-6 Bft. [15-49 km/h | 9-30 mph]
- 👤 10+

The frameless Multi-Kite combines all the good things about kiting. The contemplative and relaxing side of single line kite flying and the sporty side of stunt kite flying. With this kite, both become so easy that we recommend the Multi-Kite for kids ages 10+. Flown as a single line kite, it develops light but noticeable pull. The long tube tail helps to stabilize its flying characteristics. Simply take out part of the bridle line, attach flying straps and the Multi-Kite becomes a stunt kite.

Perfect for beginners, the kite flies slowly which helps the first time flyer to perform loops, turns and dives with ease. The attached tube tail provides a colorful trail that follows the kites every move.

Two flying modes in one kite!

For more than 20 years, the name "HQ Symphony" is a synonym for most successful foil kites worldwide. From generation to generation, all Symphonys have been adapted to the latest technological standards. With their current lines all "HQ Symphonys" belong to the "top of the line" foil kites in their classes. All "HQ Symphonys" guarantee first-class components, best workmanship and extreme durability. "HQ Symphony" offers a variety of lines for different target groups:

Symphony Beach

- Designed to match the needs of beginners, provides excellent value for the money
- Symphony Beach belongs to the most successful and best-selling foil kites worldwide
- Developed with paragliding know-how
- Highly user-friendly - no foil kite in this class has fewer bridle attachment points
- Provides excellent flight performance and decent accessories
- Equipped with wrist straps or 2-line controlbar
- Compact carrying case - ideal for traveling and holidays

Symphony Pro

- The Symphony line for demanding pilots – with uncompromising components and accessories
- Developed with paragliding know-how
- Highly user-friendly - no foil kite in this class has fewer bridle attachment points
- Provides amazing flight performance and uncompromising accessories
- 2021 update for larger Symphony Pros (2.2 & 2.5): Convert to Quad!
- Sporty designs – stylish carrying cases
- Compact carrying case - ideal for traveling and holidays

Symphony Speed II

- The Symphony line for all pilots who want to push their limits
- Higher aspect ratio enables these kites to fly much faster than regular Symphonys
- Developed with paragliding know-how
- Highly user-friendly – with uncompromising components and accessories
- Provides amazing flight performance and breathtaking speeds
- Sporty designs – stylish carrying cases
- Compact carrying cases – ideal for travelling and holidays
- Detailed instruction manual (Sportkite Guide)

Unlike a conventional ram-air foil kite, the Kick 180 has been engineered without open cells. This robustly constructed 4-line single skin kite develops surprising, but always pleasant pulling forces. Due to its remarkably low weight, the Kick 180 performs in low wind speeds. With 4-line control, the Kick 180 is easy to launch, land and reverse launch, making it easy-to-fly

and ideal for beginners. Designed and engineered with a minimal number of bridle lines, the setup and handling of this flexible wing is very user-friendly. The fear of a damaging crash is unfounded since the Kick 180 is virtually indestructible thanks to the single skin design – shattered cells belong to the past.
